End of year apprenticeship review

Coming to the end of the year I have felt like I have really come to terms with everything and am really enjoying my time with this company. I have done a wide range of jobs whilst doing my apprenticeship but recently have been moved onto doing the roofs and roof systems within Princess yachts and sunseeker which I have thoroughly enjoyed seeing every bit of how they work and are fitted from stage one all the way to the boat being finished.

These images are showing some of the work I have been doing where I am completing the wiring of a control box and motor of one of the roof systems we work on.

Another thing I enjoy is going up to sunseeker to fit their roof systems as it's nice to be able to see, understand and work on a different kind of boat rather than only Princess boats as I am able to see different things and ways of work to further better my knowledge.

I also feel as now I'm further into my apprenticeship I have a much better understanding of all things within the marine industry such as terminology, ways of work, use of tools and managing myself.

I am enjoying learning to use different tools, understanding what tools I need so I can go out and buy them and also how to use them properly. I also have enjoyed learning how different bits of kit work and problems you could face whilst working with them but also how to overcome or fix these issues as to not get stuck.

I have now also completed and passed my working at heights training so I am able to work at heights and have the knowledge to do it in a safe manner as to not cause damage to myself or others whilst working. I find this very handy and will enable me to not be restricted to what I can and can't do during present work or future work.

I thoroughly enjoy this apprenticeship and feel it has massively helped and impacted my life in a positive way and I am very excited to carry on and complete my apprenticeship here and hopefully go even further with the knowledge and help the company has given me.
