

Shay George, Apprentice Marine Engineer

Aquamare Marine, Plymouth

<https://www.aquamaremarine.com/uk/>

Whilst I have been working at Aquamare some of the jobs I have been learning are Sea keeper commissions, Patio door installs, Door installs, Bather platform installs, Crane installs and passerelle installs. Here are some photos of these jobs which I have worked on.

Whilst I have been in college we have worked on off the job training by taking apart engines and learning more in depth about all systems. In work I can use the hand skills I have built up and knowledge to make me even more helpful whilst working.

I enjoyed learning all the new Opacmare units we are fitting on the princess boats as this is all new to Aquamare it's been good to figure them out and find the best possible ways to assemble these units working together as a team.

The jobs I particular enjoy the most and/or have the most interest in would be the sea keeper commission and the door installs. What I find interesting about the sea keeper commission is finished you then test it out at sea and can

compare the boat with or without the sea keeper which shows you how effective the stabiliser is bringing the boat to almost a complete stand still against the waves. I enjoy the door installs because I have learned them inside out with thorough reports on all of them so find the process very easy and enjoyable now.

At the beginning of my apprenticeship I use to struggle to use tools but now I have much better hand skills and no longer struggle in this area. During my time at Aquamare I have now built a good knowledge on many different jobs which Aquamare specialise in. I believe I have benefited the company as they no longer have to use two qualified engineers on jobs they can use me to assist which is then saving the company money and time rather than the qualified engineer being pulled away from his current job. As well as this I have much more confidence getting stuck into and helping on new jobs in different locations making myself as useful as possible even when I am completely new to the job itself.

My plan is to be a fully qualified engineer for Aquamare and continue to further my skills on the job. I would like to be able to travel with work giving my employer an option of using me abroad on different jobs. I will take courses and educate myself on as much Aquamare related jobs as possible so I can become a valuable employee.
