

The Annual Shipwrights' Lectures 2023

17 October at MAST Studios Southampton

ONLY TWO WEEKS TO GO

Register now via this link [Lectures application form](#)

Looking forward to their contribution to the future of the marine industry we have invited apprentices from Pendennis and Berthon to discuss their plans after completion of their apprenticeships. Paul Harris, Lectures Team member and Project Manager at Maguire Boats leads the discussion.

We return to the popular theme of sustainability with James Scott-Anderson who together with representatives of four UK Joint Ventures outline the success of their initiatives.

And Sean Dempsey shares his experiences of leading Sunseeker International's lifecycle sustainability project.

Next up the use of mentoring programmes as a means of supporting and increasing female involvement in boatbuilding is highlighted by Belinda Joslin, Amy Stringfellow and Heike Lowenstein from Women in Boatbuilding.

Matt Sheahan returns to the Lectures stage for his annual update on the continuing development of all things foiling, including the advances in America's Cup racing technologies.

This year we are very fortunate in having two Keynote Speakers.

Firstly and very much on trend, Professor Adam Sobey talks about his long involvement in the mysterious world of AI and its positive impact on boat building.

And last but not least Professor John Chudley describes his professional career path from Warsash apprentice to heading up Plymouth based MLA College, and becoming Chair of the Engineering Council.

DUE TO GENEROUS SPONSORSHIP THIS ANNUAL EVENT IS FREE TO ATTEND SO REGISTER NOW

THE SHIPWRIGHTS COMPANY AND LECTURES TEAM LOOK FORWARD TO SEEING YOU ON THE 17th
