

THE 2024 ANNUAL SHIPWRIGHTS' LECTURES, TUESDAY 15 OCTOBER 2024 AT MAST STUDIOS, SOUTHAMPTON

In an increasingly competitive recruitment market, we are encouraging careers advisors and lecturers to extend the reach of the Lectures by engaging the interest of school and college leavers together with their Careers Advisors to see and learn about and appreciate the amazing employment opportunities within the maritime sector.

Returning to the Lectures stage is Louise Stafford, Jersey Ports Head of Maritime Operations and Deputy Harbour Master.

Louise Stafford

Louise will be enlarging on the measures that are being taken to improve sustainability in and around the Ports of Jersey – her lecture is entitled, 'Sustainably making a Difference'

Paul Harris

During the Apprentice session Shipwrights Lectures Team member **Paul Harris**, Project Manager at Maguire Boats will lead a discussion with current apprentices who are considering the options for progressing their own careers on completion of their Marine Apprentices training.

Former Panel member Jamie Marley from Marine Electrical Solutions will be updating attendees on recent developments that are best placed to accelerate the e-mobility transition, adding to decarbonisation of all vessels' propulsion.

Jamie Marley

Charlie Ross

Pendennis Shipyards Operations Director Charlie Ross will be using practical examples to highlight the important boatbuilding mantra, 'Getting It Right First Time'. In the past this has proved to be a very popular session of cautionary tales of the financial consequences of errors which, for whatever reason, someone has taken the decision not to 'flag up' at the time.

Save the Date!

TUESDAY 15th OCTOBER 2024
